

MetaFastWorks

The Dynamics NAV solution for online 'etail' distributors

MetaFast provides online retailers with an end-to-end, fully integrated business management solution.

Based on the power of Microsoft's Dynamics NAV, MetaFast's flexible, modular structure enables the addition of new or custom functionality as required to match the evolution of the business.

In the highly competitive and complex world of eetailing, MetaFast delivers a solution with efficient workflows and faster order cycle times, delivering improved turnover and increased profits.

Introducing MetaFast

In an environment of tough competition, increasing item and channel complexity, and decreasing margins, distribution companies need a strong business management solution to support their operations.

The system should provide inventory and warehouse management tools married to powerful financial and sales applications.

The solution should integrate customer, order and financial information, support complex item structures and inventory tracking, warehousing, pick/pack processes, labelling, shipping and order tracking.

Repetitive tasks, or those dependent on the successful completion of an earlier process, can be automated or batch processed to save time, reduce errors, and focus employee attention on satisfying customers.

Investments in inventory are maximised by improving decisions on item acquisition, storage, handling and replenishment.

Quick access to, and analysis of, business information helps improve decision-making.

All this function and flexibility is exactly what small and medium-sized distribution companies need.

And what's more, the system that delivers all this must be competitively priced, easy to use, quick to implement, easy to adapt to your own business or industry requirements and flexible enough to provide a long-term solution as the company grows.

That solution is MetaFast.

MetaFast is ideal for online retailers that deal with both B2B and B2C markets.

It helps you deal with the particular problems you face selling products over the web.

MetaFast helps you handle the high volume of orders you receive on a daily basis, next-day delivery requirements, protecting your tight margins and optimising inventory to help keep investment in stocks low and service levels high.

MetaFast will help you manage your dynamic customer relationships whilst enhancing productivity and improving profitability.
